Mississauga, ON
L5N 5P9

4TH July 2016

Dear Valued Customer:

GE Healthcare regrets to inform you that the expected return **DMSA (Kit for the Preparation of Technetium Tc99m Succimer Injection)** to the global market has been delayed indefinitely. We will be unable to provide supply of DMSA to our customers until further notice.

This continued supply interruption is due to the inability of our proposed supplier to reliably produce one of the product's key components and the additional complexities related to the manufacturing relocation of the final product to a GE Healthcare facility. Both activities require extensive final product quality-control and production method tests, which we have been unable to acceptably validate according to our specifications and standards.

We will continue to work diligently to improve and hopefully, resolve the situation. We will also update you on progress regarding when the product will, again, be available.

We sincerely regret this inconvenience to you and your patients, but we trust that this information will be helpful to you and your colleagues in managing your facilities and nuclear medicine departments.

If you would like any further clarification, please do not hesitate to contact your GE Healthcare Clinical Sales Manager or GE Healthcare Medical Affairs at 1 800 654 0118 (option 2, then option 3)

Sincerely,

A handwritten signature in black ink that reads 'Len Ducker'.
